

# SEE WELL™

## Combination Suction and Retraction Instrument

A dual tool to help you see better during oral surgery

Dentists, oral surgeons, and periodontists agree: procedures are easier and safer with a clear view of the patient's mouth. The new See Well™ combination suction and retraction instrument was developed by an oral surgeon committed to providing professionals with a less obstructed field of vision. The result? Increased surgical efficiency and safety.

Made in the USA, the innovative See Well device is ideal for difficult oral surgeries or procedures, especially those with limited space in which to work or where brisk bleeding is expected. Made of stainless steel, the flat suction device is essentially "a Seldin® with suction." **It allows the doctor to work with little – or sometimes no – assistance.**

### SEE WELL'S BENEFITS

- Improves ability to see well within the oral landscape, especially with impacted maxillary third molars
- Reduces crowding in the patient's mouth
- Facilitates ease of movement for the dentist/oral surgeon and dental assistant
- Shortens procedure time and increases safety, especially for upper teeth
- Increases surgical efficiency during full-mouth extraction cases and mandibular torus removal by evacuating blood, bone, and fluids as they are produced.
- Decreases the occurrence of accidental maxillary sinus perforation in maxillary extractions
- Reduces fatigue of dental staff

### See Well's Inventor:

*"I Knew We Could Do Better"*

*Dr. Michael DeGould, See Well inventor and entrepreneur, is first and foremost an accomplished, board-certified oral surgeon who practices in northwest Illinois. He graduated with*

*honor from Northwestern University Dental School and then completed a four-year oral and maxillofacial surgery residency at Case Western Reserve University Hospitals of Cleveland. He also spent two months at St. Richard's Hospital in Chichester, UK, for plastic and reconstructive surgery.*

*The See Well product was invented out of frustration when Dr. DeGould was fine-tuning his distinctive method of surgery. "There was just not enough room to see well and work efficiently when doing certain procedures," he maintained. "I knew we could do better. I wanted a suction and retraction device in one, and when I couldn't find one on the market, I made one. Why use two when one will do? I am confident the See Well instrument will make your job easier. It did mine!"*

**BEFORE**  
Needed two instruments  
for suction and retraction

**NOW**  
See Well combines suction  
and retraction in one

**SEE WELL™ SPECS / DIMENSIONAL DRAWING**

Country of Manufacture	U.S.A.
Patent Number	U.S. 8,221,316
Material	316 Stainless Steel
Dimensions	8.5" (L) x 0.312" (O.D.)
Wall Thickness	0.035"
